Dental

Safe and predictable

Getting the whole picture

SimPlant® treatment planning software gives your dentist three-dimensional information on the anatomy of your mouth:

- The width and density of your jawbone
- The exact location of neighboring tooth roots
- The location of the nerves

With this precise information, your dentist can start planning the ideal location for your implants, reach the best outcome and show you how your new teeth will look – even before treatment!

Know every detail in advance

Your implant dentist can “virtually” prepare your treatment to the greatest detail; you will receive a much safer and more comfortable treatment. With SimPlant® and SurgiGuide®, free-hand implant dentistry becomes a thing of the past.

Dental implants are your long-term solution for replacing one or more missing teeth – at any age.

Your virtual smile becomes reality

No surprises, maximum comfort

A personalized SurgiGuide® is your dentist's link between implant planning and actual treatment. It makes sure your dentist performs the procedure safely and according to the plan. A SurgiGuide® fits in your mouth with unparalleled precision during implant treatment and is your guarantee for maximum comfort.

Painless to you and your wallet!

- Your gums can often be left intact for faster healing
- Prevents complications
- Avoids expensive and time-consuming follow-up visits

You can have...

...a new smile as soon as you've had your treatment

Tooth loss causes you to experience

- Decreased chewing ability
- Permanent loss of jawbone, affecting your looks
- Instability of your remaining teeth

Ask your dentist which kind of implant treatment with SimPlant® and SurgiGuide® is suitable for you.

Have your dental implants placed in the safest and most comfortable way possible. Implants help preserve your looks, smile, health and self-confidence...

an investment in yourself!
